ABSTRACT

Fall 1982 enrollment trends in Connecticut higher education are presented in narrative and statistical summaries. In addition to current and historical trends, enrollment is examined by student gender, minority status, residence status, and age. Detailed tables also present the information for specific institutions and sectors. Highlights include the following: total enrollment in Connecticut colleges and universities is leveling off after growing rapidly in the 1960s and less rapidly in the 1970s; most of the growth in enrollment over the past 6 years has been in the part-time undergraduate category; in fall 1982, 86,936 women and 75,551 men were enrolled in Connecticut higher education institutions; there were 13,326 minority students in fall 1982, and the enrollment of minorities grew 26.2 percent between 1976 and 1980, compared to a national growth rate of 15.3 percent; 82.6 percent of all students in Connecticut colleges and universities in fall 1982 were Connecticut residents; in-state students represented 95.0 percent of the public sector and 62.3 percent of the private sector; two-thirds of undergraduates were 18-24 uears old, and 91.3 percent of students in this age group were full-time, while 33.2 percent were part-time. AN ANALYSIS OF ENROLLMENT TRENDS IN CONNECTICUT HIGHER EDUCATION: 1982

This report reviews enrollment trends in Connecticut higher education as of fall 1982 and provides a detailed appendix of various data by institution.

Highlights

- Total enrollment in Connecticut institutions of higher education is leveling off after growing rapidly in the 1960s and somewhat less rapidly in the 1970s (page 3).
- Undergraduate enrollment increased 0.1 percent in fall 1982 from fall 1981. Graduate enrollment declined 1.9 percent from fall 1981, while enrollment in first-professional programs increased 0.7 percent (page 6).
- Most of the growth in enrollment over the past six years has been in the part-time undergraduate category, in which the number of students increased by 41.5 percent from fall 1976 to fall 1982 (page 4). Part-time undergraduate enrollment continued to grow in fall 1982, with an increase of 2.4 percent from fall 1981 (page 7).
- In fall 1982, 86,936 women and 75,551 men were enrolled in Connecticut institutions of higher education. The number of men enrolled has remained quite stable, while the number of women enrolled has increased annually, although the rate of growth has slowed (page 8). Women were 53.5 percent of all enrollment in fall 1982 (page 9).
- In fall 1982, there were 13,326 minority students in Connecticut institutions of higher education, or 8.2 percent of the Connecticut college population. This compares to 6.9 percent in 1976 and 8.0 percent in 1980 (page 11).
- Minority enrollment in Connecticut institutions of higher education grew 26.2 percent between 1976 and 1980, compared to a national growth rate of 15.3 percent (page 12).
- 82.6 percent of all students in Connecticut institutions of higher education in fall 1982 were Connecticut residents. This breaks down to 95.0 percent in the public sector and 62.3 percent in the independent sector (page 16).
- The four-year regional independent institutions have lost in-state undergraduates but have maintained enrollment of out-of-state students. The public sector has maintained enrollment of in-state and out-of-state students (page 18)

Highlights (continued)

- Two-thirds (66.4%) of undergraduates were of traditional college age (18-24) in fall 1982. In the full-time category, 91.3 percent of students were in this age group, compared to 33.2 percent of the part-time students (page 22).

- While women continue to out-number men significantly in the older age groups at the undergraduate level (66.6% of 35-39 year-olds; 70.1% of those over 40 years of age), changes in participation by age between 1980 and 1982 are quite similar for both men and women (page 24).

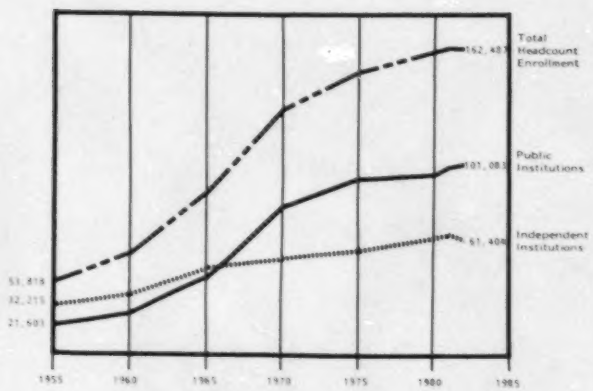
Historical Enrollment Trends

FIGURE 1

ENROLLMENT IN CONNECTICUT INSTITUTIONS OF HIGHER EDUCATION 1955 - 1982



As Connecticut higher education enters two decades of changing enrollments, it is useful to view anticipated shifts and declines in enrollment in historical perspective. Figure 1 shows total headcount enrollment in Connecticut institutions of higher education from fall 1955 to fall 1982. It is clear that total enrollment is leveling off after growing rapidly in the 1960s and somewhat less rapidly in the 1970s. Figure 1 also shows that enrollment in the public sector has grown more quickly than enrollment in the independent sector, overtaking the latter in share of students in fall 1966.

While enrollment at all types of institutions expanded in the 1960s, growth was most significant at the state colleges (now the Connecticut State University) where enrollment tripled, and in the regional community college system which developed during that decade (Table 1). During the 1970s, growth continued at the public two-year institutions and in the independent sector, while enrollment at the public four-year institutions remained quite stable.

TABLE 1

HEADCOUNT ENROLLMENT IN CONNECTICUT INSTITUTIONS OF HIGHER EDUCATION

	1962	1972	1982
University of Connecticut	14,287	20,275	22,800

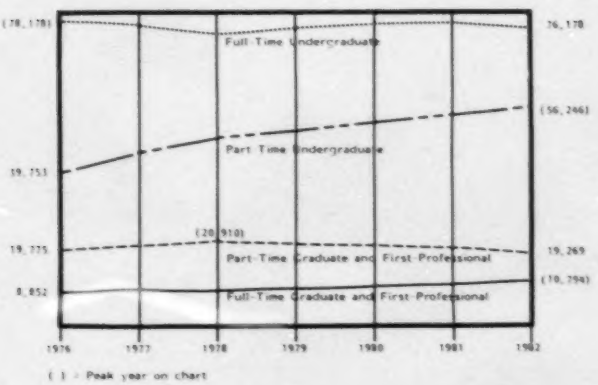
Number of Independent Institutions	27	25	26

*The University of Connecticut and its five branches are counted as one institution; count includes U.S. Coast Guard Academy. Norwalk Community College was a municipal institution in 1962.

FIGURE 2

HEADCOUNT ENROLLMENT BY LEVEL AND ENROLLMENT STATUS IN CONNECTICUT INSTITUTIONS OF HIGHER EDUCATION FALL 1976 - FALL 1982



( ) = Peak year on chart

Figure 2 shows the trends in headcount enrollment by level and enrollment status from fall 1976 to fall 1982.

- Most of the growth in enrollment over the past six years has been in the part-time undergraduate category, in which the number of students enrolled has grown 41.5% during this period. Almost half (45.7%) of Connecticut's part-time undergraduates were enrolled in regional community colleges in fall 1982, another quarter (23.8%) attended regional independent institutions and 14.2 percent attended the Connecticut State University.

- The number of students enrolling part time at the graduate level has declined annually from a peak in fall 1978.

- Full-time enrollment at the undergraduate level was down in fall 1982 for the first time since 1978, while at the post-baccalaureate level full-time enrollment continued to increase slowly.

Table 2 provides a more detailed breakdown of enrollment from fall 1976 to fall 1982 by type of institution.

- While the largest headcount growth in enrollment of part-time undergraduates has been at the regional community colleges (+8,759; +51.6%), growth also has occurred at all other types of institutions, with the exception of the two-year independent institutions.

- At the full-time undergraduate level, enrollment has fluctuated slightly at most types of institutions, with the exception of the regional community colleges, which have steadily enrolled fewer full-time students (-2,221; -18.7%), and the state technical colleges, where full-time enrollment has been up each year during the period 1976 to 1982 (+738; +27.9%).

- Full-time graduate enrollment has increased modestly at most types of institutions while part-time graduate enrollment has declined sharply at the Connecticut State University (-2,369; -31.1%) while rising or fluctuating at the other types of institutions.

- Enrollment in first-professional programs has been stable, except at the University of Bridgeport Law School where enrollment continues to expand.

Fall 1982 Enrollment

Headcount enrollment in fall 1982 was 162,487, down 236 from fall 1981. This 0.1 percent decline exactly reflects national changes in enrollment as reported in November, 1982 by the National Center for Education Statistics.

Table 3 shows headcount enrollment by type of institution, level and enrollment status, with comparisons to fall 1981. In Connecticut, headcount enrollment declined at the graduate level (-408 students, -1.9%), while undergraduate enrollment increased by 172 students (+0.1%) for an all-time high of 132,424 undergraduates. Full-time enrollment was down at the undergraduate level but up at the graduate and first-professional levels, for an overall decline of 0.9 percent. At the part-time level, this was reversed, with undergraduate part-time enrollment up and graduate and first-professional part-time enrollment down, for an overall increase of 0.7 percent. These statistics differ from national data for fall 1982, which indicate total full-time enrollment was up 0.3 percent and part-time enrollment was down 0.7 percent nationwide.

Enrollment in the Connecticut independent sector dropped in fall 1982 from one year earlier (-1,877; -3.0%), which is consistent with national data. In Connecticut, this was due largely to declines in both full-time and part-time undergraduate enrollment at the regional independent institutions.[1] In the public sector, however, overall enrollment was up (+1,641; +1.6%), again consistent with national data. Full-time undergraduate enrollment was stable at the public four-year institutions and up at the state technical colleges. Part-time undergraduate enrollment rose in all units of the public sector in fall 1982 from one year earlier.

Table A.1 and A.2 in the appendix provide data on fall 1981 and fall 1982 enrollment by institution, level and enrollment status.

Full-time-equivalent (FTE)[2] enrollment dropped slightly more than headcount enrollment in fall 1982, down 0.3 percent from fall 1981. Table 4 shows FTE enrollment by type of institution and level, with percent change from fall 1981. The decline in FTE enrollment in fall 1982 was due solely to a drop at the graduate level (-6.2%). Undergraduate FTE enrollment was stable (+0.4%) and first-professional FTE enrollment grew by 5.1 percent.

Tables A.3 and A.4 in the appendix provide data on fall 1981 and fall 1982 FTE enrollment by institution, level and enrollment status.

---

[1]A four-year independent institution is defined as a "national" institution if more than 65 percent of the full-time undergraduates are from out of state and total enrollment exceeds 300 students. The remaining four-year independent institutions are referred to as "regional" institutions.

[2]Full-time-equivalent (FTE) enrollment is a common measure of enrollment based on credit hours rather than headcount. Connecticut equates 15 undergraduate credit hours to one FTE and 12 post-baccalaureate credit hours to one FTE.

Enrollment by Gender

In fall 1982, 86,936 women and 75,551 men were enrolled in Connecticut institutions of higher education. Table 5 shows headcount enrollment by gender from 1976 to 1982. The number of men enrolled has remained quite stable, while the number of women enrolled has increased annually, although the rate of growth has slowed.

TABLE 5

% Change 1976-1982	-7.2%	+10.5%	-0.4%		+8.2%	+42.6%	+23.0%	

While the overall enrollment of men is stable, changes have occurred in their enrollment status. The number of men enrolled full time declined early in the period while the number of men enrolled part time increased. For women, however, enrollment has increased in most years in both the full-time and part-time categories, although at somewhat different rates (8.2% and 42.6% respectively from 1976 to 1982). Preliminary national enrollment data for fall 1982 show a 0.2 percent increase from fall 1981 in the enrollment of men and a 0.4 percent decline in female enrollment. As can be seen from Table 5, this was not the case in Connecticut, where the enrollment of men declined 0.5 percent in fall 1982 from one year earlier, while the enrollment of women increased 0.2 percent.

Table 6 shows women as a proportion of enrollment by various categories. Women became the majority of all students in Connecticut higher education in 1978. They now constitute 53.5 percent of all Connecticut students, 54.4 percent of undergraduates, 51.2 percent of graduate students and 35.5 percent of first-professional students. Nationally, women were 51.6 percent of all students in fall 1982.

TABLE 6

2-Year	49.6%	52.2%	54.9%	55.4%	58.1%	58.4%	58.9%
By Enrollment Status							
Full-time	46.4%	47.6%	48.6%	49.8%	50.1%	50.4%	50.2%
Part-time	51.0%	52.6%	54.2%	55.6%	56.4%	56.8%	57.3%

Table 7 shows enrollment of all students from 1976 to 1982 by level and enrollment status. The greatest headcount growth has occurred in the enrollment of women at the part-time undergraduate level (+12,926). The number of women has increased in each category except at the part-time graduate level, where enrollment had returned by fall 1982 to the 1976 level. For men, too, the largest headcount growth occurred at the part-time undergraduate level (+3,567), but increases also have occurred in

full-time graduate enrollment and at the first-professional level. The overall drop in the enrollment of men on a full-time basis noted in Table 5 is due solely to a drop in undergraduate enrollment (-3,887).

Table 8 shows women as a percent of total enrollment by type of institution from 1976 to 1982. Women have increased their representation at each type of institution over the six-year period, with the exception of the Connecticut State University, where the proportion of women has remained stable. The most impressive change is at the state technical colleges where women were 10.6 percent of those enrolled in 1976 compared to 25.8 percent in 1982.

Table A.5 in the appendix provides data from 1976 to 1982 by type of institution, level and gender, while table A.6 provides a detailed breakdown by institution for fall 1982.

Minority Enrollment[3]

There were 13,326 minority students enrolled in Connecticut institutions of higher education in fall 1982, or 8.2 percent of the total Connecticut college population. Between 1976 and 1982, minority participation in Connecticut higher education grew by 31.7 percent, compared to an 8.7 percent growth among non-minority students. Growth occurred in all ethnic categories between 1976 and 1982 as shown in Table 9.

TABLE 9

ENROLLMENT BY ETHNIC CATEGORY AND PERCENT CHANGE
IN CONNECTICUT INSTITUTIONS OF HIGHER EDUCATION
FALL 1976 - FALL 1982

	1976	1978	1980	1982	% Change 1976-82	% Change 1980-82
Black, Non-Hispanic	6,989	7,532	7,907	7,622	+ 9.1%	- 3.6%
Native American	296	308	474	574	+ 93.9%	+ 21.1%
Asian or Pacific Islander	762	1,157	1,643	2,021	+165.2%	+ 23.0%
Hispanic	2,074	2,665	2,753	3,109	+ 49.9%	+ 12.9%
TOTAL, MINORITY	10,121	11,662	12,777	13,326	+ 31.7%	+ 4.3%
White, Non-Hispanic	134,984	140,635	144,789	146,013	+ 8.2%	+ 0.9%
Non-Resident Alien	1,453	1,945	2,488	3,148	+116.7%	+ 26.5%
TOTAL, NON-MINORITY	136,437	142,580	147,277	149,161	+ 8.7%	+ 1.3%
TOTAL	146,558	154,242	160,054	162,487	+ 10.9%	+ 1.5%

Table 9 also shows that in the six-year period between 1976 and 1982, the largest rate of enrollment growth took place in the Asian or Pacific Islander student population, which almost tripled (+165.2%; +1,021), and the non-resident alien population, which more than doubled (+116.7%; +3,148) in enrollment. The smallest rate of enrollment growth was in the white ethnic category (up by 8.2% or 11,029 students) followed by enrollment of black students (+9.1%; +633). The largest headcount growth was in the white category.

---

[3]Minority refers to Black, Native American, Asian or Pacific Islander and Hispanic students who are either United States citizens or permanent residents. Non-minority refers to all other students, including white (non-Hispanic) and non-resident aliens. Minority data are collected biannually.

Although the total number of minority students enrolled in Connecticut higher education has increased in each reporting period, the rate of growth is decelerating. From 1976 to 1978, the minority student population grew by 15.2 percent (1,541 students) compared to 9.6 percent from 1978 to 1980 (1,115 students) and 4.3 percent from 1980 to 1982 (549 students). Enrollment of black students actually declined by 3.6 percent (-285 students) from 1980 to 1982.

Table 10 compares minority enrollment in Connecticut higher education to national rates (national data are not yet available for 1982).

TABLE 10

CONNECTICUT AND NATIONAL PARTICIPATION RATES
FOR MINORITY STUDENTS IN HIGHER EDUCATION
FALL 1976 - FALL 1982

	1976	1978	1980	1982
Minorities as Percent of National Population	-	-	20.4%*	-
Minorities as Percent of Connecticut Population	-	-	12.0%*	-
Minorities as Percent of Students in Higher Education - National (including non-resident aliens)	15.4% (17.4%)	15.9% (18.1%)	16.1% (18.7%)	n.a.
Minorities as Percent of Students in Higher Education - Connecticut (including non-resident aliens)	6.9% (7.9%)	7.6% (8.8%)	8.0% (9.5%)	8.2% (10.1%)

*Includes non-resident aliens who belong to ethnic minority groups.

While minorities are enrolled in Connecticut institutions at rates below the national level (8.0% vs. 16.1% in 1980), it is important to note that there are proportionally fewer minorities in the Connecticut population than in the nation generally (12.0% vs. 20.4%). At both the state and national levels, minorities are still under-represented in higher education. In Connecticut institutions of higher education, however, minority enrollment grew 26.2 percent between 1976 and 1980, compared to a national growth rate of 15.3 percent.

Table 11 presents minority enrollment by student level for the six-year period, 1976-1982. In 1982, 8.8 percent of all undergraduates were minority students, compared to 8.6 percent at the first-professional level and 5.2 percent at the graduate level. Minority participation at the undergraduate level has risen steadily between 1976 and 1982 while at the graduate level, it dropped in 1982 from 1980. Participation at the first-professional level has fluctuated, with a high of 9.6 percent in 1978.

Minority representation in first-professional programs, however, continues to exceed the proportion of bachelor's degrees that are awarded to minority students in Connecticut (5.0% in 1982), which is a measure of the qualified pool of candidates for these programs.

TABLE 11

TOTAL, ALL INSTITUTIONS	10,121	6.9%	11,662	7.6%	12,777	8.0%	13,326	8.2%

*Estimated, based on 1980 data.

Minority student enrollment as a proportion of all enrollment has increased from 6.9 percent in 1976 to 8.2 percent in 1982. In the public sector, the percentage rose from 7.3 percent to 8.9 percent. In the independent sector, minority participation has fluctuated over the period with the minority percentage in 1982 (7.1%) slightly lower than the percentage in 1976 (7.2%).

- At the University of Connecticut, minority enrollment as a percent of total enrollment increased from 3.7 percent in 1976 to 6.6 percent in 1980, but declined to 6.1 percent in 1982. Headcount minority enrollment also declined in 1982 from 1980 (-48 students).

- At the UConn Health Center, minority enrollment doubled from 20 to 41 students between 1976 and 1982. By 1982, minorities represented 7.9 percent of all students.

- Minority enrollment at the Connecticut State University has increased steadily from 3.4 percent in 1978 to 6.0 percent in 1982, following a decline in 1978 from 1976 .

- The regional community colleges enrolled the largest percentage (13.3%) as well as the largest number (4,695) of minority students in fall 1982. Minority headcount enrollment decreased slightly between 1978 to 1980, but was up again to an all-time high in 1982. Minorities as a percent of total enrollment peaked, however, in 1976 at 13.8 percent.

- Minority students constituted 8.8 percent of total enrollment at the state technical colleges in fall 1982. This percentage has fluctuated over the six-year period and was highest in 1978 (9.3%). Headcount enrollment in 1982, however, was at an all-time high (803 students).

- Four-year national independent institutions enrolled the second highest proportion of minorities: 10.1 percent in fall 1982. These institutions, however, are likely to attract minority students from a national pool of candidates where minority representation is higher than in Connecticut (see Table 10).

- Four-year regional independent institutions enrolled the second largest number (2,506) of minority students in fall 1982 despite a decline of 334 students from 1980. Minority students, however, were only 5.9 percent of total enrollment in 1982, a rate that was quite similar to the University of Connecticut (6.1%) and the Connecticut State University (6.0%).

- While minority enrollment as a proportion of total enrollment at two-year independent institutions declined from 8.3 percent in 1976 to 6.1 percent in 1980, it was up again to 8.3 percent in 1982. Headcount enrollment of minority students reached a high of 129 in 1982.

In summary, minority enrollment has dropped by 11.8 percent at the regional independent institutions from 1980, and by 3.3 percent at the University of Connecticut. The largest percent increase occurred at the state technical colleges, up 30.8 percent in 1982 from 1980. The largest headcount increase occurred at the regional community colleges, up 504 students in 1982 from 1980.

Fall 1982 minority enrollment by ethnic category and type of institution is provided in Table 13. The public sector enrolled 67.1 percent of minority students compared to 61.8 percent of non-minority students.

*Estimated, based on 1980 data.

- The regional community colleges enrolled the most black students (40.5% of all blacks) and Hispanic students (36.5%).
- The largest proportion of Native American students (37.1%) were enrolled at the Connecticut State University.
- 29.4 percent of Asian students were enrolled at four-year national independent institutions followed by the University of Connecticut (15.8%).
- Over one quarter (26.5%) of white students were enrolled at the regional independent institutions, followed by the regional community colleges (20.9%) and the Connecticut State University (20.6%).
- Almost one-half of non-resident aliens (43.4%) were enrolled at the regional independent institutions followed by the national independent institutions (28.3%).

A detailed breakdown of minority enrollment by institution for fall 1982 is provided in the appendix (Table A.7).

Enrollment by Residence Status[4]

In fall 1982, the vast majority of Connecticut's students came from within state:

	In-State	Out-of-State	Foreign
Public	95.0%	4.1%	0.9%
Independent	62.3%	33.8%	3.9%
Total	82.6%	15.4%	2.0%

Table 14 presents residency data by type of institution and enrollment level for fall 1982.

- At the undergraduate level in fall 1982, 96.7 percent of all students in the public sector were Connecticut residents, compared to 61.2 percent in the independent sector. Three quarters (75.4%) of in-state undergraduates were enrolled in the public sector, while out-of-state and foreign students were more likely to be enrolled in the independent sector (87.0% and 72.0% respectively). The regional community colleges enrolled the largest number of Connecticut residents (35,016), followed by the Connecticut State University (24,833) and the independent regional institutions (23,684). Connecticut residents represented only 21.0 percent of the undergraduates enrolled at the four national independent institutions in Connecticut, while they were 75.2 percent of those at the regional institutions.

---

[4]All data in this section exclude the U.S. Coast Guard Academy, which did not provide residency data.

- At the graduate level, 83.5 percent of all students in the public sector were Connecticut residents in fall 1982, compared to 70.5 percent in the independent sector. Just over half (50.5%) of in-state graduate students were enrolled in independent institutions for fall 1982. Both out-of-state and foreign graduate students, like their undergraduate counterparts, were more likely to be enrolled in the independent sector (66.9% and 72.9% respectively).

- First-professional level students in the public sector were mostly Connecticut residents (91.8%). At the UConn Health Center alone, this proportion was even higher (94.8%). In the independent sector, 28.4 percent of students enrolled at this level were Connecticut residents in fall 1982.

Table A.8 in the appendix provides an institutional breakdown of enrollment by residence status and level for fall 1982.

Data on the residence status of all students enrolling at the undergraduate level in Connecticut institutions of higher education have been collected since 1980. These data are summarized in tables 15 and 16. The first table (15) provides some descriptive characteristics of Connecticut residents who were enrolled as undergraduates in Connecticut institutions between 1980 to 1982.

Independent	1,418	3.3%	1,218	2.8%	1,209	2.7%

The total number of in-state undergraduates enrolling in the public sector has been increasing since 1980, while the number enrolling in the independent sector has been declining. The independent sector has been losing its share of both full-time and part-time undergraduate Connecticut residents, and headcount enrollment was down from the previous year in both categories in fall 1982. Full-time enrollment of in-state undergraduates also has been dropping in the public sector, although more slowly. Part-time enrollment of in-state undergraduates continues to grow in the public sector. The last two categories in Table 15 show enrollment of in-state undergraduates by two-year and four-year institutions. At both types of public institutions, headcount enrollment increased from fall 1980 to fall 1982, as has their share of students. In contrast, the number of Connecticut residents enrolled in both two-year and four-year independent institutions has declined each year from 1980. It appears that Connecticut residents who remain in-state at the undergraduate level are choosing to enroll more often in the public sector on both a full-time and part-time basis as well as by level of institution.

The next table (16) shows the distribution of in-state, out-of-state and foreign undergraduates among types of institutions from fall 1980 to fall 1982.

- The increase in undergraduate enrollment of Connecticut residents at the University of Connecticut is due to growth at the part-time level. The enrollment of out-of-state and foreign students has increased slightly from 1980 to 1982, but still represents a small proportion of the undergraduate population (7.2% in fall 1982).

- Undergraduate enrollment of Connecticut residents on a full-time basis has remained stable at the Connecticut State University, while part-time enrollment has increased by more than 10 percent from 1980 to 1982. The enrollment of out-of-state students has increased slightly, but as at the University of Connecticut, these students continue to represent a small proportion of the undergraduate student body (5.2% in fall 1982).

- Both the regional community colleges and the state technical colleges enroll mostly Connecticut residents (99.0% and 99.5% respectively in fall 1982).

- While Table 15 showed that there has been a substantial decline in enrollment of in-state undergraduates in Connecticut's independent institutions from 1981 to 1982, Table 16 shows that this change is due largely to a drop in enrollment at the regional institutions (-1,851, or -7.2% from fall 1981 to fall 1982). These institutions, however, have maintained or increased slightly their enrollment of out-of-state students. By fall 1982, 24.8 percent of all undergraduates at these institutions were from other states or foreign countries, compared to 22.4 percent in fall 1980. Over half (54.4% in fall 1982) of all in-state undergraduates attending regional independent institutions do so on a part-time basis.

- There has been little change in in-state versus out-of-state enrollment at the four-year national institutions (21.0% Connecticut residents in fall 1982), while the two-year independent institutions have lost in-state students over the three-year period.

In summary, from fall 1980 to fall 1982, in-state full-time undergraduate enrollment declined more slowly in the public sector (-490; -1.1%) than the independent sector (-1,490, -9.9%). In-state part-time enrollment was up in the public sector (+4,175; +11.2%) but down in the independent sector (-520; -3.6%). Full-time out-of-state enrollment grew in both sectors from 1980 to 1982 (+450, +22.3%; and +688, +4.3%; respectively).

The shift away from the independent sector is apparent only among Connecticut residents. Out-of-state students continue to be attracted to Connecticut institutions. This suggests that the choice of whether to attend college in state is made early in a student's or family's decision process. Growing cost differentials may be more important in the decision whether to enroll in the public sector for those students who have chosen to remain in-state for their college education. In addition, the choice whether to attend college in the public sector may depend on whether the student is admitted to the public institution of preference. With a slight lessening of overall competition for admission in the 1980s due to fewer traditional-age students, public institutions may be able to admit students who would have enrolled previously in a Connecticut independent regional institution as a second choice. The Department of Higher Education (DHE) plans to collect annual admissions data from Connecticut institutions in order to track this process more closely during the 1980s and 1990s.

Enrollment by Age

The changing age characteristics of the U.S. population during the 1980s and 1990s concomitantly will bring changes in the age characteristics of students enrolled in higher education. The number of 18-24 year-olds in the nation's population already is shrinking annually. The eighteen-year old population peaked in 1979 and will continue to decline until 1994. The 18-24 year-old cohort peaked in 1981 and will not cease its decline until about 1997.

The demographics of the older population are somewhat different. As the baby-boom cohort moves into the over 25-age group during the 1980s, the numbers in the 25-40 year-old age group will swell. But by the mid-nineties, this group will begin to decline in numbers, as the baby-bust cohort ages.

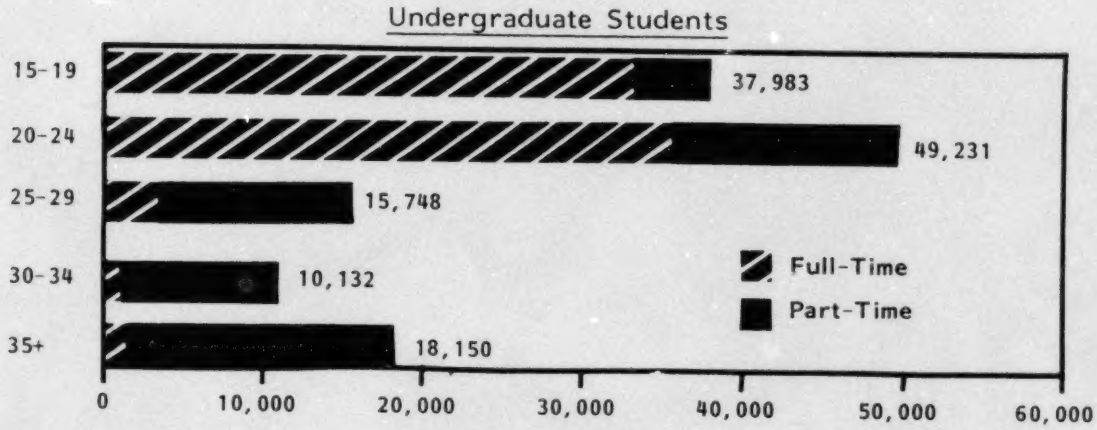
Thus, while in the 1980s higher education will be faced with an aging student population as more adults are available for recruitment, by the 1990s this trend will reverse, as the 25-40 year-old age group declines in size while the 18-24 year-old age group begins to grow in size again. Exactly what will be the size and composition of the higher education student body is hard to predict, since it will depend on many factors and events that are beyond our ability to foretell. Who would have guessed 15 years ago that women would take advantage of higher education to the degree that they now do, that career-oriented programs would become so popular and that adults would enroll in such numbers? Higher education in the 1980s and 1990s will be influenced by changes in individual demand, changing state and federal policies, changing demands of business and industry for trained manpower, and changes in alternative sources of post-secondary education, especially corporate education programs.

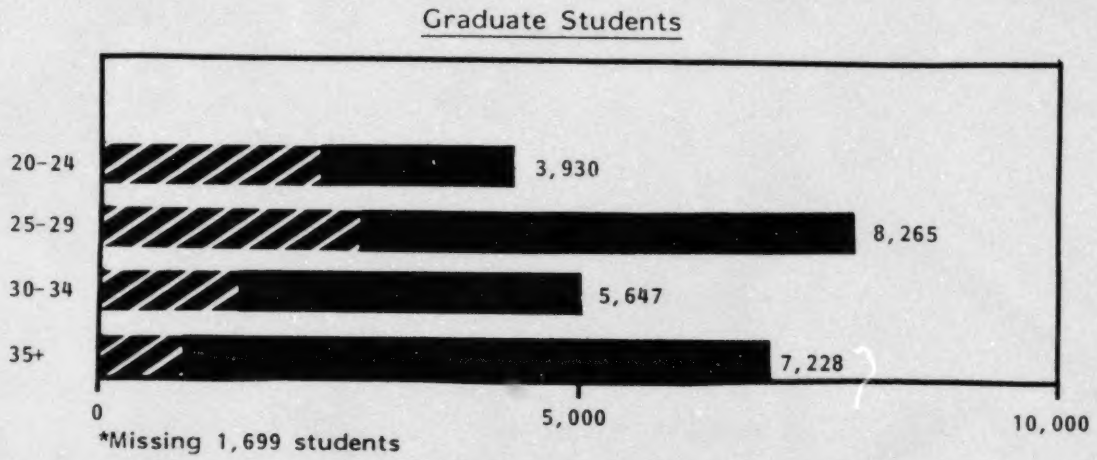
DHE's enrollment projections assume that people of the same age and from the same residence areas will continue to attend at the same rates as they did in 1980. Under these conditions, undergraduate headcount enrollment in Connecticut could be expected to fall about six percent from 1980 to 1990, with an FTE drop of about 11 percent. DHE has been collecting age data on students in Connecticut higher education since fall 1980. With three years' data on undergraduates now available, it is possible to begin to examine changing patterns that may be taking place in enrollment by age. Are these changes simply a reflection of the changing age of the population, or are different age groups exhibiting enrollment behavior that diverges from this static participation rate assumption of enrollment? This section describes 1982 enrollment by age with comparisons to 1980 and 1981 where possible. Data on graduate and first-professional students were available incompletely in fall 1980 and fall 1981. Data for fall 1982, however, are presented.

Figure 3 shows the age distribution of Connecticut students by level in fall 1982.

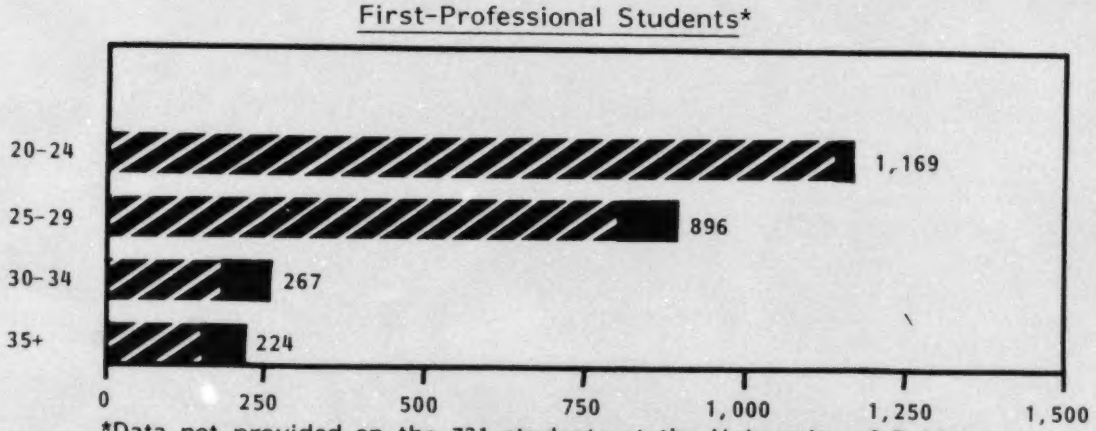
FIGURE 3

AGE DISTRIBUTION OF STUDENTS
IN CONNECTICUT INSTITUTIONS OF HIGHER EDUCATION
FALL 1982
(Note: Scales differ by level)





*Missing 1,699 students



*Data not provided on the 721 students at the University of Bridgeport Law School.

- Two-thirds (66.4%) of undergraduates were of traditional college age (18-24) in fall 1982. In the full-time category, 91.3 percent of the students were in this age group, compared to 33.2 percent of the part-time students.

- At the graduate level, 25-29 year-olds make up 32.9 percent of all students, while 28.8 percent were over the age of 35 in 1982. Full-time graduate students are likely to be under 30 years of age (81.0% in 1982). Only in the 20-24 year-old category were more graduate students enrolled as full-time students than part-time students.

- First-professional students are considerably younger, on the average, than graduate students. Nearly half (45.7%) were 20-24 years old, and 80.8 percent were under 30 years of age in fall 1982.

Table 17 provides three years of age data on undergraduates by type of institution for the state as a whole.

- Statewide enrollment of young (15-19) students has increased over the three-year period 1980 to 1982 (+3.0%), despite a decline in the total number of 15-19 year-olds in the population. Data on Connecticut high school graduate activity for 1980 and 1981 (Table 18) suggest that while the proportion of high school graduates continuing into higher education is stable, the proportion remaining in Connecticut for higher education is increasing slightly. However, data on the activities on 1982 high school graduates are not yet available to confirm this trend.

- When enrollment of students in this age category (15-19) is examined by type of institution (Table 17), small declines are seen at the Connecticut State University and the national independent institutions, while other types of institutions show increases in enrollment over the three-year period.

- The number of undergraduate students in the 20-24 year-old category has declined slightly statewide in each of the three years, despite the fact that the population base was stable, suggesting a decreasing participation rate in Connecticut higher education for this age group. The drop was most apparent at the part-time level of enrollment (-4.4%).

- The number of full-time undergraduate students in each of the older categories (25+) declined in each of the three years (-18.8%), a clear indication of declining participation rates for older students, since the population base continues to increase. This decline is most apparent in enrollment at the regional community colleges and the regional independent institutions. Part-time enrollment, on the other hand, was up 13.6 percent, with particularly striking increases in enrollment of those over 35 years of age (+23.5%). Only the regional independent institutions and two-year independent institutions did not benefit from this increased enrollment of part-time older students.

Much of the recent growth in undergraduate enrollment has been ascribed to the enrollment of older women. Table 19 presents age data by gender and enrollment status for undergraduates from fall 1980 to fall 1982, while figure 4 presents data for fall 1982.

- Among the youngest age group (15-19), women were the majority at both the full-time and part-time levels in each of the three years. The enrollment of both men and women, however, increased during the period.

- The statewide drop in enrollment of 20-24 year-olds is apparent for both women (-2.4%) and men (-1.3%).

- The drop in full-time enrollment of older students (+25) is due to falling enrollment of both women (-764; -17.5%) and men (-746; -20.3%). Part-time enrollment was up for both women and men, with increases of 3,240 students (+16.6%) and 1,243 students (+9.2%) respectively.

In summary, while women continue to out-number significantly men in the older age groups (66.6% of 35-39 year-olds; 70.1% of those over 40 years of age), changes in participation by age are quite similar for both men and women.
